

Adult stem cells saved Peyton Manning's career and may help you

Adult stem cells saved quarterback **Peyton Manning's** career following a neck injury that kept him sidelined for the entire 2011-12 **National Football League** season. After two earlier surgeries failed to correct a painful bulging disc in his neck, Manning, now a **Denver Bronco**, traveled to Switzerland where he underwent one or more cutting-edge treatments that involved injecting his own adult stem cells directly into his neck.
