

Projecting agricultural impacts of climate change, can GM crops help?

In a summer like this, as we watch crop conditions wither in record-setting heat and dry conditions, we might wonder whether we're seeing an anomaly or a preview of coming years. And if the climate is changing, how will it affect agricultural production? A new report from the USDA's Economic Research (ERS) service examines those questions, evaluating how agricultural production could adapt to a range of climate scenarios.
