

Can apple stem cells give women straight hair?

Apple stem cells from a rare Swiss apple, called the Uttwiler Spätlauber, are rich in hydrogen, phytonutrients, antioxidants, proteins and age resistant cells. These apple stem cells are being utilized for the first time within a hair straightening product line. It makes perfect sense, since the stem cells have excellent strengthening and anti-aging properties that enhance the longevity of the hair follicles and protect the hair's own stem cells. Currently, apple stem cells are the most exciting breakthrough ingredient within the cosmetics industry.
