

Biotechnology is not all about foods only: What are the other applications?

Biotechnology is not all about foods only. There is much more in store for future of mankind. Even if we may or may not like Agricultural Biotechnology which is estimated to be \$6 billion market (2005), including applications such as: Pest-resistant plants, Higher protein&vitamin content in foods, drugs developed and grown as plant products, drought-resistant, cold-tolerant, and higher-yielding crops biotechnology is going to stay and grow.
