

## Brazil aims to clone jaguars, maned wolves, other endangered species

Brazilian scientists are attempting to clone animals in danger of extinction, like the jaguar and maned wolf, although the potential impact on the conservation of these threatened species is still not clear. The cloning initiative is being undertaken by the Brasilia Zoological Garden in partnership with the Brazilian government's agricultural research agency, EMBRAPA, and is now in its second phase. The research is aimed at adapting cloning techniques to wild animal species as a means of contributing to conservation.
