

Costa Rica battles Monsanto over GMO corn

With the exception of about 1,000 acres of land that have been devoted to the cultivation of transgenic crops for research purposes — these include cotton, soy beans, bananas, and pineapples — the Central American nation of Costa Rica, which is known for its bio-diverse agricultural heritage and stunning landscape, is essentially free of genetically modified organisms (GMOs) in its native food supply. But the world's most evil company, Monsanto, is once again trying to destroy this by quietly ushering in a variety of GM corn that Costa Ricans have been working feverishly in recent days to block from being approved.
