

GM 'toxic gene' headlines are grossly inaccurate

The following is an excerpt.

A [recent paper](#) in the journal *GM Crops and Food* has generated an outsized splash in the press, particularly in biotechnology-averse Europe. Apparently the genetically modified food crops that hundreds of millions of people around the world have been eating without incident for more than a decade are in fact horribly toxic. But it turns out that the research that triggered this alarm proves no such thing. How did an arcane scientific finding get turned into a completely incorrect, apocalyptic headline? Let's dig into it like scientifically educated journalists.
