

We consume DNA every day with no ill effects

*The following is an excerpt.*

Across the Forbes.com platform yesterday Jon Entine, Executive Director of the [Genetic Literacy Project](#), [offered an op-ed](#) on concerns regarding the existence of plant virus DNA sequences in transgenic plant food products. [Read his article](#) and the comment thread to see the concerns...

My scientific opinion is that real-world impact of any concerns regarding the Cauliflower mosaic virus (CaMV) 35S gene promoter would require a combination of several, low-probability-to-highly-unlikely biological events.
