

Colorado rejects labels for genetically engineered food

The following is an excerpt.

Colorado lawmakers Thursday rejected a proposal that would have required genetically engineered food to be labeled, amid fears that the mandate would burden farmers and raise food prices.

A Democratic House committee voted 7-2 against the bill after more than five hours of emotional testimony from mothers seeking labels and farmers saying the requirement would hurt them. The lawmakers ultimately sided with farm groups that said the change would need to be done on a federal level and not by an individual state.
