

## Fighting GM crop vandalism with a government-protected research site

*The following is an excerpt.*

Genetically modified (GM) crops have been a source of great controversy—particularly in Europe—but acts of vandalism and associated security costs have made scientific evidence about the health and ecological impacts of those crops hard to come by. A Swiss government-protected field site dedicated for use in GM crop studies could serve as an example to other European countries interested in pursuing crop biotechnology, according to an article published in *Trends in Biotechnology*, a Cell Press publication, on February 28.
