

The papers of Watson, Crick, and other genetics pioneers now available online

The following is an excerpt.

Codebreakers: Makers of modern genetics, which launches today at wellcomelibrary.org/codebreakers, contains more than one million pages of first-hand notes, letters, sketches, lectures, photographs and essays from the circle of brilliant minds responsible for uncovering the structure of DNA. The site lays bare the personal and professional thoughts, rivalries, blind alleys and breakthroughs of the scientists whose ideas transformed our understanding of the matter of life
