

GMO pickle claim leaves you scratching your head

[UPDATE, 23 April 2013 — The post excerpted here is satire. Our apologies for any confusion. You can see a follow-up to this post here: [Eating GMO pickles will not turn any body part bald.](#)]

The following is an excerpt.

Eating lunch while catching up on the news, the headline “Monsanto Genetically Modified (GMO) Cucumbers Cause Genital Baldness” made me choke on my sweet gherkins.

Scratching my head, musing the possibility: could there be a strand of truth in that? If it is on the Internet, it must be true. I read on, clutching my iPad with both hands.

The article said a six-month study at Dalhousie University in Canada revealed that Monsanto-developed GMO cucumbers had resulted in total groin hair loss and chaffed “sensitive areas.” Arrrgh.
