

## Cancer centers race to map patients' genes

*The following is an excerpt.*

Major academic medical centers in New York and around the country are spending and recruiting heavily in what has become an arms race within the war on [cancer](#). The investments are based on the belief that the medical establishment is moving toward the routine sequencing of every patient's genome in the quest for "precision medicine," a course for prevention and treatment based on the special, even unique characteristics of the patient's genes.
