

## Global economic benefits of GM crops reach almost \$100 billion

*The following is an excerpt.*

In a press release by PG Economics, [biotech crops](#) on its sixteenth year of commercialization has delivered an unparalleled level of farm income benefits to farmers and provided considerable environmental benefits to countries planting biotech crops. Close to \$100 billion global farm income has been gained during the 16 period due to yield gains from lower pest and weed pressure and improved genetics, and reduced cost of production.
