

Gay germ censorship

The following is an excerpt.

The notion of a Gay Germ—homosexuality transmitted as some sort of infection—probably horrifies many mainstream intellectuals unfamiliar with the details of modern evolutionary biology. Therefore, it is perhaps unsurprising that [my recent column](#) discussing that subject quickly provoked a striking example of Internet censorship. But the circumstances were different than people might naively expect.

Most of the responses to my analysis were quite reasonable and respectful. Anthropologist Peter Frost published a [column](#) questioning some of my arguments, which generated an extended comment thread. George Mason University's Genetic Literacy Project also provided [a brief summary](#) and link.
