

French anti-GM protesters target “hidden GMOs”

I have often marveled at the hypocrisy of anti-biotech crop activists who ignored hundreds of crop varieties produced using the relatively crude method of chemical or radiation mutagenesis. I had to ask:

If anti-biotechies are so afraid of genetic changes in their foods, why aren't they out protesting varieties produced by means of mutation breeding?

Now French anti-biotech activists, filled with pent up antinomian fury over something or other, have now heeded my question. They are now destroying “hidden GMOs” – that is crop varieties produced by mutation breeding.
