

DTC genetic test results reveal the surprising truth about a 1964 kidnapping case

As the FBI dusts off its files on a 1964 kidnapping and reunion mixup, the man at the center of the case has uncovered a tantalizing clue through his own sleuthing.

Paul Fronczak, 49, used a home DNA test earlier this year to reveal that he is not the biological son of the couple who raised him. They had mistakenly believed that a toddler found abandoned in New Jersey was their son, who had been abducted from a hospital in Chicago a year earlier.

Now, Fronczak is using the genealogy website Ancestry.com to discover his true identity and has determined — again with DNA — that a third and a fourth cousin are registered with the site, a spokesman said.
