

Seralini set for September UK tour to speak about his research

The most detailed scientific study ever conducted on the health effects of a genetically modified (GM) food was published last year. The findings of the study, led by Prof Gilles-Eric Seralini at the University of Caen in France, were shocking. Rats fed over a two-year period with two Monsanto products, a GM maize and tiny amounts of the Roundup herbicide that the maize is engineered to tolerate being sprayed with, had increased rates of severe organ damage, tumors, and premature death.
