

Baby born after 19 years as an embryo

Kelly Burke of Virginia is grateful to be a new mom at 45. She gave birth to son Liam James nine months ago, but it's not her age, these days, that's the amazing part. What's noteworthy here is that her baby was the result of a donated embryo—the second oldest cryopreserved human embryo in history, her doctors believe.

Even the doctors at the Reproductive Science Center of the San Francisco Bay Area, which oversaw the transfer of the donated embryos, were a bit amazed at the viability of the 19-year-old embryos.
