

Pakistan: Scientific truth about agri biotechnology

Introduction of new technologies has always been resisted in any field by the people who are the beneficiaries of the status-quo and those afraid of any new technology. Same thing is happening to agriculture in Pakistan and there is heated debate in the country on the introduction of genetically-modified or biotech crops, although data shows it is the most rapidly adopted crop technology in the history of modern agriculture.

Introduced first in 1996, today genetically-modified or biotech crops are being grown by millions of farmers across the globe – from the United States to Philippines.
