

Exaggerated perception of GMO risk doesn't align with political left

Despite the common claim that GMO-aversion is a problem of the political left, this does not seem to be so.

Cultural polarization on risks is the exception and not the rule. A polarized future for GM food risks is possible, but we're not there yet, and any interesting prediction of why that's where we'll end up would have to reflect a decent theoretical account of why GM foods will emerge as one of the lucky few risk sources that get to travel down the polarization path when so many don't.
