

## Borlaug's Green Revolution: Neither green, nor revolutionary

The Rockefeller Foundation, always around for funding long-term investments such as food and agriculture which the US government views as a key instrument of global control, helped set up the Mexico Agricultural Programme in 1941, and Dr. Norman Borlaug with it.

He was an agronomist who knew a lot of biology, but he overlooked the ecological part. He knew that every seed evolved to fit the local soil, climate, temperature, rainfall, wildlife and other environmental factors. This accounted for hundreds or thousands of varieties of the same grain, fruit or vegetable scattered all over the world. It didn't make sense developing a few more superfluous varieties when everything possible had already evolved.
