

World's '17 most dangerous foods' includes no GMOs

The GLP aggregated and excerpted this blog/article to reflect the diversity of news, opinion and analysis.

A list of the world's 17 most dangerous foods...does not include GMOs. You might expect unusual sounding animals and fruits from the depths of the rain-forest to have deadly dining consequences, but there are 'regular' foods that should come with a warning sign too. Elderberries, cashews and rhubarb leaves have made it onto a list of fatal – or extremely harmful – foods that people should absolutely avoid or take extreme care when eating.
