

Talking Biotech: “Pesticides”—New frontier of agricultural biotechnology opposition

The topic of “pesticides” is the new frontier in the opposition to agricultural biotechnology. Opponents of the technology blame new genetic improvement methods for perceived increases in chemical controls for plant, animal and fungal pests. However, scientists argue that our pest control strategies are increasingly focused, less toxic, and work better. This episode features an interview with Dr. Steve Savage. He is a life-long Biotech to clarify many of the concerns about

Talking Biotech #18 – Dr. Steve Savage Pesticides, myths, organics, and more

**Steve and I listen to late-night testimony about
biotech seeds and pest controls in Kauai. July
2013**
