

Soylent meal replacement drink embraces GMOs

The GLP aggregated and excerpted this blog/article to reflect the diversity of news, opinion and analysis.

“PRO GMO”. In Hollywood, that’s attention-getting advertising. It’s common to see messages criticizing genetically modified organisms or [Monsanto](#) in Los Angeles.

Walking into many grocery stores in Greater Los Angeles, or on-campus in the free speech zone of my school, Los Angeles City College, results in being aggressively solicited by Greenpeace [chuggers](#) to join their anti-GMO cause. Colleagues and friends have attempted to shame me for eating certain foods because they contain GMOs.

[Soylent](#) is liquid or powder meal replacement. It’s meant to give people the option to have the proper nutrients and calories without spending a lot of time preparing meals. [It doesn’t appeal to everyone.](#)

When Soylent 2.0 was being launched, some alt-medders were upset to find out it contained genetically modified organisms. Instead of changing the formula or apologizing, Soylent explained GMOs on their website and they are now embracing it in their ads.

However you feel about replacing all or some of your meals with a drink, I think it’s great that they aren’t caving into the nonsense of GMO fears. Perhaps the Soylent team realizes that we aren’t all into pseudoscience and they might be able to educate some people in the process.
