

Eight states currently debating GMO labelling legislation

The GLP aggregated and excerpted this blog/article to reflect the diversity of news, opinion and analysis.

Even as Congress looks to work out a solution on GMO labeling, state legislatures are once again looking at the issue and other controls for the technology. In . . . New York, legislators in Albany are considering bills on everything from labeling food and seed, to liability for contamination of organic crops, to a prohibition on cultivation of GE crops and the sale of GE salmon. . . .Details on the bills in New York here: <http://bit.ly/1PxVWNH>.

. . . Maine and Massachusetts are likely the states to watch for action. . . .The latest on Maine's bill [here](#) and Pro Ag looked at the Massachusetts bill late last year *here*.

. . .Other states are also already looking at legislation related to GMOs. Among them are:

— Rhode Island: Lawmakers here are considering at least three bills that would require GMO foods to be labeled. . . . Details on the legislation [here](#).

— Florida: A pair of bills would require labeling of GMO foods and raw agricultural commodities. . . . The bills are [here](#) and [here](#).

— Alaska: While the state already has a law requiring the labeling of GE salmon, lawmakers are now weighing a measure that would ban the sale of any GMO fish or fish product in the state. . .The bills are [here](#) and [here](#).

— Missouri: A bill in the state House would require the labeling of GE foods. . . while a resolution . . . calls for the science-based regulation of new agricultural technologies. The measures are [here](#) and [here](#).

— New Jersey: The state Senate is set to consider legislation that would require products to be labeled six months after enactment of the measure: <http://bit.ly/1NvYKty>
