

## Are Greenpeace, anti-GMO activists to blame for golden rice's delay?

What is missing in the [the recent Nobel laureates' [letter](#) accusing Greenpeace of a "*crime against humanity*" for opposing genetically modified (GMO) golden rice] and among the supporters and developers of GMOs is the recognition and scientific analysis of some tough facts.

. . . .

No functioning vitamin A rice has been produced in over 20 years of research. This is despite full support at every level: financial, institutional, political, and corporate. . . .

. . . .

A quick [evidence](#) check is sufficient to reveal the simple reason why golden rice is not in farmer's fields: it is still not ready because it is not performing agronomically. . . .

Neither Greenpeace nor the destruction of a test plot in the Philippines by local activists can be held responsible for this lack of scientific achievement.

. . . .

Leaving aside its scientific aspects, the very concept of golden rice. . . remain doomed from the start . . .

. . . .Combating hunger and malnutrition one vitamin and mineral at a time is a failed ideology, no matter . . .  
. . which kind of delivery system one chooses.
