

## Big breakthrough? Man's penis injected with stem cells at controversial clinic

Ben Greenfield is a cult figure among fitness fanatics, a guru to the sort of nerds who devote themselves to meticulously monitoring their own biometric data for insight into their personal health.

...

Now he may become known for something else entirely: Injecting himself with stem cells in hopes that it will make his dick bigger.

...

In November, Greenfield visited U.S. Stem Cell, a controversial clinic in Florida, to have his penis injected with his own stem cells. If the name of the clinic seems familiar, that's because it's the same Florida clinic that last year [unintentionally blinded](#) three patients in a clinical trial of an unproven stem cell therapy.

...

Greenfield had U.S. Stem Cell isolate stem cells from his body's fat cells. Then, said Greenfield, those stem cells were injected into the "meat of the tissue" of his penis.

...

Three or four days after the procedure, he said, it was "almost like it grew." His erections were also bigger, his penis got harder, and his orgasms were better, he said. The better orgasms, he said, might be a placebo effect, but the anatomical changes in size "cannot be denied."

...

"There is still a risk," he said. "But the payoff in terms of health is very big. You can't always wait for things to be thoroughly studied."
