

## Audio: Crash course on the CRISPR-edited foods headed for grocery stores

Genetically modified organisms, GMOs, have been common on American farms for years. But a new generation of gene-edited food, through a process called CRISPR, is on its way and expected to change our crops and supermarket shelves. Some farmers and scientists [say there needs to be oversight](#) of gene-edited crops and animals. [Carey Goldberg](#) ([@commonhealth](#)) of WBUR reports.
