

Viewpoint: Want to fight climate change? Embrace GMOs, don't ban them

The fight against climate change has become one of the most widely discussed topics in the UK and globally. And for good reason. However, it is alarming that this noble goal is often used to justify all sorts of bans.

...

However unpopular it may be, gene modification has many benefits. It improves agricultural performance and reduces the need for chemicals. It also drives down the cost, energy usage and carbon emissions associated with tractor diesel fuel and pesticide spraying. Enabling gene modification would lead to lower prices in the shops and encourage farmers to innovate.
