

Infographic: 13 ways artificial intelligence will help us live to 100

We've long been searching for ways to extend the human lifespan, which currently sits around 79 years. Of course, there are those who live well beyond that point — with the longest-living [person](#) reaching 122 years before dying in 1997. But can we push that average life expectancy to 100 and beyond? This infographic offers a variety of ways in which artificial intelligence can help us get there:
