

Infographic: GMO tomatoes? There's no such thing. Here are the only biotech crops grown in the US

Are you paying more for “non-GMO pasta?” Then you’re not using your noodle. What are the facts? There are only 10 genetically modified crops available today. Those are:

- Alfalfa
- Apples
- Canola
- Corn
- Cotton
- Papaya
- Potatoes
- Soybeans
- Squash and
- Sugar beets

The infographic below identifies the genetic traits expressed, as well as the uses of the 10 GMO crops approved in the U.S.
