

Miami private school bars vaccinated students for 30 days, falsely claiming they could be a danger to the unvaccinated

A Miami private school, which [previously asked teachers not to get the Covid-19 vaccine](#) or they wouldn't be allowed to return this school year, has now asked parents to keep their children home for 30 days if their child has received a vaccine dose, citing false and disproved claims about the impact of the inoculation, according to a letter sent to parents and obtained by [CNN affiliate WSVN](#).

The school had previously made unsubstantiated claims about adverse reactions non-vaccinated people could have by "interacting with people who have been vaccinated" that have not been identified in or supported by research by the Centers for Disease Control, Food and Drug Administration, National Institutes of Health or World Health Organization.

...

The CDC, on its [page dedicated to Myths and Facts](#) about vaccines, says: "Vaccine shedding is the term used to describe the release or discharge of any of the vaccine components in or outside of the body. Vaccine shedding can only occur when a vaccine contains a weakened version of the virus. None of the vaccines authorized for use in the U.S. contain a live virus."
