

Video: 'Weapon in our armory' — Developer of Golden Rice says genetically modified crops are essential for food security as global warming makes crops more vulnerable

Nafees Meah, regional representative for South Asia for the Philippines-based International Rice Research Institute, calls genetically modified crops “a weapon in our armory” to address global food security; he says the world is going to get warmer with climate change, so people will have to develop crop varieties resistant to it, including GM crops.
