Risk Assessment

**Health Canada**

- **Hazard Assessment**
  - "Products containing glyphosate do not present unacceptable risks to human health or the environment when used according to the revised product label directions... Risks to [occupational] handlers are not of concern for all scenarios"
  - "Based on the epidemiological data as well as data from long-term studies in rats and mice, taking a weight of evidence approach, no hazard classification for carcinogenicity is not justified"
  - "Glyphosate is unlikely to be genotoxic or to pose a carcinogenic threat to humans... Neither the epidemiological data nor the evidence from animal studies demonstrated causality between exposure to glyphosate and the development of cancer in humans"
  - "No evidence of toxicity containing glyphosate are safe to use as per the label instructions"

- **Hazard Group on Glyphosate**
  - "Taking all the evidence into account i.e. animal experiments, epidemiological studies and statistical analyses... The AGG proposes that a classification of glyphosate with regard to carcinogenicity is not justified"
  - "Level of evidence of carcinogenicity in animals and humans is considered to be relatively limited"
